

MILLER WIRE WORKS, INC.

WELDED WIRE SCREENS

Extreme High Tensile Wire

High Carbon or Stainless Steel

A Long Life & Anti-plugging Solution

Punch Plate Plugging

Plugging Eliminated

A customer was having a severe plugging issue with perforated plate screens on an 8x20 running uphill. The customer tried Welded on lower right discharge side and a Flex-Mat® style Diamond

weave on the lower left side. While both eliminated the plugging, Welded was about 1/2 cost of Diamond and used a larger wire guaranteeing longer life over the Diamond.
